

Github:

Goto : <https://github.com/settings/developers>

The screenshot shows the GitHub Developer settings page. On the left, there is a sidebar with three options: 'GitHub Apps', 'OAuth Apps' (which is highlighted with a red vertical bar), and 'Personal access tokens'. The main content area is titled 'No OAuth applications' and includes a sub-header 'OAuth applications are used to access the GitHub API. [Read the docs](#) to find out more'. Below this, there is a green button labeled 'Register a new application'.

Click on register new application and enter details, click on Register

The screenshot shows the GitHub OAuth application registration form. It contains several fields: 'Application name' with the value 'my-git-sample', 'Homepage URL' with the value 'http://localhost:8081', 'Application description' with the value 'Application description is optional', and 'Authorization callback URL' with the value 'http://localhost:8081'. A red arrow points to the 'Register application' button at the bottom. The 'Cancel' button is also visible next to it.

Copy Client id and click on generate new Client Secret

my-git-sample

 javabyraghu owns this application.

Transfer ownership

You can list your application in the [GitHub Marketplace](#) so that other users can discover it.
